

# Measuring The Cost Of Government Services

## 2. Alternative price indexes

Because there isn't one single measure of inflation, the government and researchers use a variety of methods to get the most balanced picture of how prices fluctuate in the economy. Two of the most commonly used price indexes are the consumer price index (CPI) and the GDP deflator.

The CPI for this year is calculated by dividing the \_\_\_\_\_ using \_\_\_\_\_ by the \_\_\_\_\_ and multiplying by \_\_\_\_\_.

value of all goods and services produced in the economy this year

cost of a given market basket of goods and services

value of all goods and services produced in the economy in the base year

Indicate whether each scenario will affect the GDP deflator or the CPI for the United States. Check all that apply.

Scenario	Shows up in the...	
	GDP Deflator	CPI
An increase in the price of a Waterman Industries deep-water reel, which is a commercial fishing product used for deep-sea fishing, made in the U.S., but not bought by U.S. consumers	<input type="checkbox"/>	<input type="checkbox"/>
A decrease in the price of a German-made car that is popular among U.S. consumers	<input type="checkbox"/>	<input type="checkbox"/>
